

# D-A Titan Blue™ Grease

“I’m sold on this grease.”

*Titan Blue Shines in Tough Conditions*

## GETTING INVESTED

Bizzack Construction Company has been using D-A Lubricant products for more than 50 years and is always interested in what new products have been or are being developed that may give them an edge in the ultra-competitive world they operate in.

Tom Edison, equipment manager for Bizzack Construction, was one of the first ones ready to give **Titan Blue** a try after discussing how this product works. Bizzack had been using a product previously available through D-A, but after discussing the makeup of **Titan Blue** and the theory behind it, he was in.

## DIGGING IN

Bizzack Construction Company is headquartered in Lexington, Ky., and does large-scale highway and site construction work. Many of their operations are located in the mountains of eastern Kentucky and West Virginia. Therefore, the material to be removed results in tough digging conditions that can cause excessive stress and wear on bucket pins and bushings.

Tough conditions are where **Titan Blue** shines!

## PREMIUM UNDER PRESSURE

Bizzack recently finished the large dirt moving work at a road widening project in Hazard, Ky. The main material mover on the site was a 10 cubic yard hydraulic excavator. This machine put in 1,460 hours of work at this location and was disassembled and moved to another road building project in Pikeville, Ky. When this move occurred and reassembly took place, it would have been normal procedure to replace the bucket pins and bushings, but this was unnecessary since the machine had been greased with **Titan Blue**.

## BIG COST SAVINGS

Bizzack has moved two of these machines in the past six months with the pins and bushings showing almost zero wear. They saved three days of downtime and \$15,000 on each of these two machines. "I'm sold on this grease," said Tom Edison. The machine cited previously is currently still running on the project in Pikeville, Ky., with more than 3,200 hours on the same pins and bushings.

## A GAME CHANGER

**Titan Blue** is a lithium sulfinate complex grease, which is an unusual combination that offers many advantages. Lithium-based greases are the most widely used and, therefore, **Titan Blue** offers a great amount of compatibility when changing from previous greases. When you add the durability of a sulfinate complex thickener and an unmatched additive package, the combination created is truly a game changer.

**Contact your local TBM for more information on Titan Blue.**
